

GEL-500 (No fragrance) EPOLEON®

Epoleon Gel-500 is a revolutionary, new type of deodorizer for odors in enclosed spaces such as boat cabin odor, car interior odor, refrigerator odor, automobile odor, casket odor, etc. The conventional gel-type deodorizers contain fragrances for the purpose of masking odors. However, Epoleon Gel-500, a gel-type deodorizer created by Research & Development Department, is a new, chemical-reaction type of odor-absorbing deodorizer containing polyacrylic ester gel.

Gel-500 has a superior deodorization effect for various kinds of malodor gasses and shows its effectiveness immediately. Wide temperature ranges do not destroy the effectiveness of Epoleon Gel making it the ideal deodorizer for closed areas including refrigerators.

The volume of Epoleon Gel reduces with the evaporation of the water in the gel. During the evaporation time period, the effectiveness of deodorization does not change. The basic deodorizing agent does not evaporate. Epoleon Gel is a safe, non-polluting product.

Gel-500 works best when it is used in enclosed space where no airflow from outside. The results vary depending on enclosed area size and how enclosed the area.

Applications: Refrigerator, Bathroom, Living Room, Closet, Basement, Automobile, locker Room, etc.

Direction: Remove lid and place in area where malodors are generated. Use 2 or more jars for large areas. Place it in safe area where in reach out of children and pets. To obtain maximum performance, use it in closed area.
